Test Plan

#	Explanation of test	Aim of Test	Result
1	List of formulas can be viewed in the formula list	To ensure that the program correctly inputs the formulas from the txt file	All the formulas will be able to be seen in the formula list
2a	Input text into the variable and chemical formula textboxes	Ensures that the user can input into the program	All inputted text shows in the textbox on screen
2b	When the calculate, button is clicked answer is outputted to text box	Ensure that the program correctly outputs an answer for a given input	The correct answer for the calculation is outputted
3	Constant menu opens successfully and all constants appear correctly	Ensure that the constant correctly configure in the constant window	All constants can be viewed and selected
4	The program successfully filters the formula list when user adds to the search line	Ensure that the search bar works as intended	The formula should alter viewable formulas based on the text input in the search bar.
5	When the balance button is clicked the correctly balanced formula is outputted to text box	Ensure that the program correctly outputs a balanced formula for the unbalanced input	The properly balanced formula is outputted
6	All navigating buttons (menu specific, back, x buttons) do the desired function such as opening a new window returning to a previous window and stopping and exiting the program	Ensure that the program is easy to navigate for the user	All buttons work as intended without causing errors.
